

Lower Facility Temperatures 10° Boost Work Output by 27%

Midwest summer heat and humidity can be brutal on your employees and your bottom line. One of our customers recently measured the temperature atop a facility mezzanine at a blood-boiling 125 degrees! **According to a NASA report, heat stress can reduce worker output by up to 79%, with a loss in accuracy rate up to a whopping 700%.**

NASA REPORT CR-1205-1 on Heat Stress

Effective Temperature (°F)	75	80	85	90	95	100	105
Loss in Work Output	3%	8%	18%	29%	45%	62%	79%
Loss in Accuracy		5%	40%	300%	700%		

W.E. Carlson works with thousands of customers every year to increase productivity and accuracy (and therefore safety!) with ventilation solutions appropriate for any budget or application. **Find out more at www.wecarlson.com or call 847.640.0011. Rockford area call 815.873.9901.**

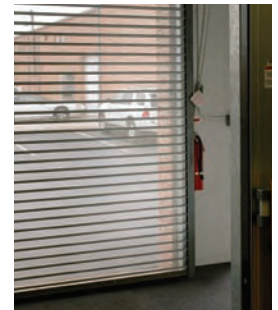

Revolution™ Fan

The Revolution Fan can make your employees feel 10–12 degrees cooler—and up to 27% more productive. This High Volume/Low Speed fan is more energy efficient than traditional industrial ceiling or floor fans, operating for just pennies-per-hour and delivering energy cost savings of up to 30%.

Screen Doors

Take advantage of cool breezy days without dirt and pest infiltration by installing a screen door at the loading dock. Options include sectional, fabric roll-up, and even screened steel for the highest level of security in a smaller footprint. We also carry a line of doors appropriate for food industry applications.

Rite-Hite AirLine Fabric Air Tunnel

The AirLine delivers balanced ambient airflow with Spot-On™ Air Outlets every 15" throughout the length of the fabric air tunnel. Available in lengths of 30' to 80', the AirLine reduces energy consumption, as well as eliminates airflow obstructions and noise associated with both floor and wall mounted fans.

Pedestrian Screen Doors

Pedestrian doors with screen inserts are a secure ventilation solution.

Coolman Fan

Don't forget employees unloading trucks: The Coolman Fan is designed to push cool air all the way to the front of the trailer, keeping workers comfortable and more productive.
